EDUCATION

B.Sc (First Class Honours) Computer Science, Covenant University

Relevant Coursework: Software Engineering, C/C++, Java, Python, Systems Analysis & Design, Data Structures & Algorithms, Digital Electronics, Interface Design, Database Design and Management, Artificial Intelligence.

TECHNICAL SKILLS

Expert Proficiency

React, TypeScript, JavaScript, Next.js, Tailwind CSS, ShadCN, HTML5, CSS3, Git/GitHub, Framer Motion, Redux, Redux Toolkit, React Query.

Intermediate Proficiency

Vue.js, Nuxt.js, Express.js, PostgreSQL, MongoDB/Mongoose, Vitest, Jest, Python, Flask, Docker, AWS, GCP.

WORK EXPERIENCE

Frontend Engineer

P2Vest

January 2026 — till date

Lagos, Nigeria

Rewrote the legacy internal back-office application in React 19, adopting Redux Toolkit for state management and TanStack Query for efficient server state and data fetching.

Built and maintained the Revveme blog platform (blog.revveme.com), a content site for Revveme within the P2vest group.

Developed a corporate portal enabling partner companies to manage their Revve accounts and services.

Frontend Engineer

Brillare Integrated Services

March 2024 — till date

Remote

Brillare IS.: Engineered and deployed the company’s official website, achieving a 100% responsive design and implementing SEO best practices, which boosted organic search visibility by 35% and improved average session duration.

Unoye: Designed and implemented the frontend for an ERP system covering multiple business modules, including disbursements, HR, leave management, timesheets, shift management, attendance, and payroll. Also developed the official platform website, reducing administrative overhead by 25% and improving brand visibility.

MyNamely: Developed the frontend for a platform that allows employees to record and share correct name pronunciations, and created the official platform website.

Frontend Engineer

Ohmsflex

March 2024 — December 2025

Lagos, Nigeria

Implemented a monthly filtering feature, cutting product request search and analysis time by over 40%, improving decision-making speed.

Redesigned the request handling system to support bulk product requests, increasing large-order processing efficiency by 60% and reducing manual workload.

Frontend Engineering Intern

P2Vest

March 2024 — August 2024

Lagos, Nigeria

Built the frontend of an internal reporting tool for data analysis using React and Material Tailwind, enabling the analytics team to generate reports 50% faster and improve insight accuracy.

PROJECTS

AstroPay

July 2026

Built the user-facing dashboard for AstroPay, a payment authorization platform enabling users to grant AI agents (Claude, ChatGPT, autonomous agents) spend-limited mandates without exposing bank credentials - architected with React 19, TypeScript, Redux Toolkit, and TanStack Query.

Implemented an OAuth 2.0 consent flow for MCP (Model Context Protocol) clients, letting AI agents like Claude authenticate and connect to user accounts with scoped, revocable permissions - a novel integration pattern for AI-agent-to-fintech authorization.

Designed and shipped multi-level payment approval workflows, including budget proposals, multi-source funding allocation, spend request justification, and configurable authorization thresholds, reducing ambiguity in agent-initiated transactions.

Integrated NIBSS e-mandate bank account linking, building the UI for direct debit authorization, funding source management, and transaction fee transparency across wallet operations.

AdaptLearn

June 2025

Developed a cutting-edge adaptive testing web platform using Next.js, TypeScript, Tailwind CSS, ShadCN, React Hook Form, and Framer Motion for a responsive and highly interactive user experience.

Engineered seamless frontend-to-backend integration, coupling a Next.js + Express + TypeScript backend with MongoDB/Mongoose, enabling real-time ability estimation and performance tracking.

Implemented a backend AI model using Python and Flask, incorporating the CAT-IRT model to dynamically adjust question difficulty based on learner performance.

Delivered targeted assessments covering key data structures—including arrays, linked lists, trees, and graphs—with real-time visual analytics illustrating learners’ ability progression.

Checkmeout

July 2024

- Built a link-in-bio and creator monetization platform enabling users to consolidate social links, payment support, and a guestbook into a single customizable public profile, with a real-time analytics dashboard tracking page views, click-through rates, visitor demographics, and referral sources.
- Designed the frontend with Next.js and Tailwind CSS, creating a clean, responsive, and user-friendly interface optimized for both desktop and mobile.
- Integrated Firebase authentication and Firestore Database to support secure login, persistent data storage, and profile image uploads.
- Delivered a seamless user experience that allows developers to quickly generate a professional or social media public profile displaying their name, profile picture, email, and social links, simplifying networking and personal branding.
- Implemented SEO for public profile pages to improve visibility in search results.

Hebron Bites

July 2022

- Pioneered the complete rewrite of Hebron Bites, a food delivery platform operating at Covenant University, migrating from PHP to Next.js to achieve faster page load times, improved SEO, and an enhanced user interface and navigation flow, resulting in a 35% increase in on-site engagement.
- Designed and developed the official Hebron Bites Telegram bot, enabling students to order food directly within Telegram. This solution improved accessibility for users with poor campus internet speeds.
- Increased overall customer traffic and orders by over 80% through the adoption of the Telegram bot as the preferred ordering channel, praised for its speed, simplicity, and ease of navigation.
